

New MGA Offer

ClockOn the Ultimate Time and Attendance System

In recent years there have been many time and attendance products, but there has never been a total solution until now. ClockOn has been developed by a retailer to suit retail needs and it will be supported by the MGA in 2008.

Time, attendance and payroll applications have previously relied on paper based time sheets being completed by employees, compiled by an administrator and manually entered into a ledger. This process is subject to flawed employee memory and secondary data entry errors, resulting in inaccurate payrolls and the frequent need for subsequent correction.

This condition still applies to many supermarkets and is recognised by the MGA as a major obstacle to improved accountability, productivity and accuracy in workplace relations. Compounding this, current and evolving legislation is changing the way employers and employees engage, making a revolution in handling time and attendance vital for the future.

Electronically captured employee sign on and off time entries are automatically integrated with a sophisticated and powerful management system ensuring total data integrity and achieving improved compliance, reduced stress, lowered costs.

Supermarkets that have started using the system have achieved extraordinary savings on their payroll through closer management reporting. This combines with the savings in outside contractors for production of pay slips and EFT, make the ClockOn system a perfect solution.

Some of the innovations include:

- The first end to end solution from the capture of attendance to payroll processing in-house.
- 'Department Manager,' enabling ultra high level cost centre management and reporting.
- 'Allowance Manager' enabling allowances and adjustments to be added and calculated automatically.
- 'Rates and Roles Manager' enabling retailers with junior staff to be freed from the tedium of age-related manual pay rate upgrades.
- 'Breaks Manager' giving the ability to record multiple breaks during any shift and to apply special rules and penalty rates to these when necessary.
- Advance Payroll enabling greater processing efficiency and improved access to all pay slip data from within the payroll wizard.
- 'Roster Costing' enabling precise payroll cost at the time the roster is created.

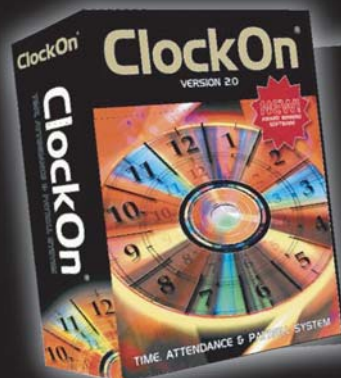

ClockOn

TIME & ATTENDANCE, HR & PAYROLL SYSTEMS

SAVE UP TO 90% IN PAYROLL PROCESSING TIME WITH CLOCKON

ClockOn is an affordable and comprehensive time, attendance and payroll software system designed to meet the demands of independent supermarkets.

Supported by the MGA Workplace Relations Team

KEY FEATURES INCLUDE:
Powerful rostering features
Electronic time capture devices
Integrated award interpreter
Human Resources management tools
Exports to accounting systems
Facilitates compliance with legislation and awards
Upgrades included in support contract
